User Opt-in Procedure for Notifications from https://taf.codes:

Notifications from https://taf.codes are ONLY directed to the sole proprietor himself.

The source code of the alert system is available here:
https://forge.taf.codes/taf/snippets/src/branch/main/watchdog/digitalocean-bandwidth

That software monitors cloud infrastructure to send alerts to the administrator (me).

I opt-in to receiving alerts by writing my phone number into a configuration file (see [the configuration example](#)). When I type my own phone number into the field: "TWILIO_TO_NUMBER", I am consenting to receive the notifications that I am sending myself.

Note: Although this software is available publicly, nobody else can cause any other phone number to receive any messages, because my Twilio API key remains private to me.
